EDUCATION

Master of Science in Electrical Engineering | Space Systems Engineering

University of New Mexico

Fall 2026

GPA: 3.94/4.00

Master of Science in Aerospace Engineering

University of Illinois Urbana-Champaign

Fall 2024

Bachelor of Science in Aerospace Engineering

Iowa State University

Spring 2022

SKILLS

Programming Languages: MATLAB, Python, C/C++, Ruby

Frameworks / Libraries / Tools: NumPy, SciPy, Matplotlib, Astropy, Poliastro, bpy, git

Applications: Simulink, Blender

WORK EXPERIENCE

Student Co-Op, Electronics for Contested Space Group

September 2025 – Present

MIT Lincoln Laboratory

- Led design of a new **S-band communication architecture**, integrating flight-like hardware and simulation to reestablish links with lost-communication satellites.
- Implemented an ***Unscented Kalman Filter (UKF)*** for precise radio frequency measurements and state estimation
- Built a probabilistic detection tool to compute observation likelihoods from resident space object (RSO) properties and optical sensor performance.

Guidance, Navigation & Controls Engineer Intern

May 2025 – August 2025

Blue Canyon Technologies

- Performed post-environment (TVAC/vibe) functional testing of ***IMU***, ***Nano Star Tracker***, ***Reaction Wheels***, ***Torque Rods***, and ***Sun Sensors***; verified polarity, health, and performance against flight acceptance criteria.
- Led root-cause investigation of ***SADA*** command-response latency; characterized timing delay across modes, identified the source, and informed updates to command/telemetry interfaces and test limits.
- Automated ***SADA*** validation in ***COSMOS*** with ***Ruby*** scripts; mapped telemetry channels, implemented pass/fail logic, and generated reproducible test reports.

Guidance, Navigation & Controls Engineer Intern

January 2025 – April 2025

Blue Origin

- Designed a hybrid ***Active Disturbance Rejection Control (ADRC)*** + ***Sliding Mode Control (SMC)*** controller; used an extended state observer and a sliding manifold for robust tracking under uncertainty and actuator limits.
- Injected time-domain disturbances and conducted a trade study comparing the hybrid controller to ***PID*** and ***LQR*** on LTI systems; benchmarked rise time, settling time, and overshoot.
- Integrated flight software into ***Simulink*** via ***C S-functions*** to run full closed-loop simulations.

Guidance, Navigation & Controls Engineer Intern

May 2024 – August 2024

Varda Space Industries

- Conducted trade studies to optimize gravity models for mission requirements and select the best filter (***Extended Kalman Filter (EKF)*** vs. ***Unscented Kalman Filter (UKF)***)
- Created Monte Carlo simulations to perform flight safety analysis and develop reentry criteria for capsule reentry
- Implemented an ***EKF*** for state estimation, optimizing ground station data timing to minimize residuals and enable precise delta-v planning
- Implemented unit testing for the code base and introduced CI/CD pipelines using Bamboo

Guidance, Navigation & Controls Engineer Intern

May 2023 – August 2023

Space Dynamics Laboratory

- Implemented a UKF with range iteration and least-squares orbit determination methods for **relative orbit determination using angles-only measurements**
- Performed Monte Carlo analysis on relative orbits to identify challenging observability scenarios and refine the estimation algorithm
- Programmed and developed unit tests for the ***Lambert Solver*** to be utilized with ***Initial Orbit Determination (IOD)***

RESEARCH PROJECTS

Delta-V Minimization from Geostationary Orbit to Mars

- Generated pork-chop plots using Lambert solutions and cross-validated optimizer results with the plot's global and local minimum regions to ensure consistency
- Utilized Blender's Python API to visualize the optimized trajectory and animate planetary motion
