

You have already accepted this offer.

Dear **Scott Nguyen**,

On behalf of the National Aeronautics and Space Administration (NASA), we are pleased to inform you that you have been selected for a STEM Opportunity with the **Spacecraft Guidance, Navigation, and Control (GN&C) Development and Testing in Intern: Spring 2026**.

If you do not respond by 11:59 pm, Eastern Standard Time (EST) on **December 23, 2025**, this award offer will be withdrawn.

Funding Source: NI-JSC

Award Text:

Congratulations on being selected for a NASA Internship for Spring 2026! Please read this letter closely before accepting the offer.

Internship Details: This internship opportunity is sponsored by the NASA Office of STEM Engagement at Johnson Space Center and will be administered by HX5, LLC. If you have questions about this offer or the internship at any time, please contact Andrew Monaco at andrew.e.monaco@nasa.gov

Stipend Payments: Stipend payments are administered by HX5, LLC. **To receive your stipend payment, you must set up an electronic payment account through HX5, LLC.** An email will be sent to you with instructions for setting up this account. **You must set up your account no later than January 7th, 2026 to receive payment.** Your stipend payment is contingent upon completion of the payment account set-up. Delays in set up of this account will impact receipt of your payment. If you have questions about stipend payments, please email agency-nasasteminternships@mail.nasa.gov (<mailto:agency-nasasteminternships@mail.nasa.gov>).

By accepting this offer, you are confirming that you agree to participate in a NASA internship and comply with these requirements. Once you have accepted the offer, you are committing to fulfilling the terms discussed at the time of acceptance and for the duration of the internship. Interns who fail to report may be subject to disciplinary action, up to and including termination from the internship program, based on circumstances. **Prior to accepting this offer, please take into consideration time, academic obligations, and other life circumstances.**

- Spring 2026 NASA internships will be 15 weeks.
- All internships are on-site. You will be responsible for planning your travel and covering your travel expenses. You will receive further guidance regarding recommended travel dates and the NASA onboarding process upon acceptance of this offer.
- Interns are responsible for securing their own accommodations for the duration of their internship session. NASA does not endorse housing for interns.
- NASA is dedicated to improving the recruitment, promotion, and retention of qualified individuals with disabilities by providing the information and resources necessary to support them and to accomplish the Agency's mission. Please tell us if you require a reasonable accommodation to perform your duties as an intern. Examples of reasonable accommodation include making a change to work procedures, using a sign language interpreter, or using specialized equipment/software. For neurodiverse individuals,

accommodations can include assistive technology or workplace support for communication/assignments. If you require an accommodation, please reach out to agency-nasasteminternships@mail.nasa.gov (<mailto:agency-nasasteminternships@mail.nasa.gov>).

Session dates: January 26 – May 8, 2026

Location: On-site @ Johnson Space Center

**NASA reserves the right to end this placement at any time if it is in the Agency's interests to do so.*

Award Amount: 14850

Contact Hours: 600

Opportunity Details

Note- This is an in person internship onsite at NASA Johnson Space Center in Houston, TX. Only apply if you can commit to moving in person!

The Safe and Precise Landing Integrated Capabilities Evolution (SPLICE) project is a technology development project maturing various technologies for precision landing applications. The project is preparing for a flight test of its flight software, avionics, and GN&C algorithms. This internship will support flight test preparation activities including software, hardware and/or algorithm development and testing.

Additionally, the Simulation, Emulation, Navigation, Sensing, and STAR (SENSS) laboratory supports the advancement of state-of-the-art spacecraft GN&C systems for rendezvous, proximity operations, docking (RPOD) and entry, descent, landing (EDL) operations. The lab houses a novel robotics platform, Six-Dof Tendon Actuated Robot (STAR), which is utilized to emulate various spacecraft operations enabling hardware-in-the-loop testing in representative environments. Various support tasks for the SENSS lab will also be in scope for this internship.

The tasks the intern will be working on will vary greatly based on the intern's skills and the lab's current needs. The tasks could include:

- Performing machine vision sensor (camera, LIDAR) calibration/metrology
- Developing and executing hardware-in-the-loop (HITL) and flight test plans/procedures
- Developing and testing flight software for inertial and/or machine vision sen...
