Hiring Team
Research Ignited LLC

Dear Hiring Team,

I am writing to express my interest in the Online Aerospace Engineering Instructor position with Research Ignited. As both an aerospace engineer and educator, I am excited by the opportunity to help middle and high school students explore aviation, drones, satellites, and space mission design through engaging and accessible STEM instruction.

My background combines professional aerospace engineering experience with extensive teaching, tutoring, and outreach experience. Professionally, I have worked in Guidance, Navigation, and Controls roles with the Air Force Research Laboratory, NASA Johnson Space Center, MIT Lincoln Laboratory, Blue Canyon Technologies, Blue Origin, Varda Space Industries, and Space Dynamics Laboratory. Through these experiences, I have worked with autonomous systems, robotics, spacecraft navigation, orbit determination, satellite tracking, flight software, and aerospace simulation tools.

In parallel with my engineering work, I have consistently pursued opportunities to teach and mentor students. I have served as a high school mathematics teacher, a Youth Development Professional with the Boys & Girls Club, a university teaching assistant for astronomy courses, a rocketry instructor through the National Defense Education Program, and a private tutor in mathematics, physics, and SAT/ACT preparation. These experiences have taught me how to explain technical concepts in ways that are engaging, approachable, and appropriate for students with diverse backgrounds and learning styles.

What excites me most about this opportunity is the chance to introduce students to real aerospace engineering through project-based learning. Whether discussing how aircraft generate lift, how satellites remain in orbit, how drones navigate autonomously, or how engineers design missions beyond Earth, I enjoy helping students connect classroom concepts to real-world aerospace applications. I believe that curiosity and hands-on exploration are powerful tools for learning, and I would be excited to help students develop both technical understanding and confidence through Research Ignited's Aerospace Engineering & Mission Design Lab.

I am available for evening and weekend instruction and would welcome opportunities

Scott Nguyen scott.nguyen8901@gmail.com (515) 943-6283 link

to contribute to curriculum development, student mentorship, and capstone project guidance. Thank you for your time and consideration. I would be excited to contribute my aerospace background, teaching experience, and enthusiasm for STEM education to Research Ignited's programs.

Sincerely,

Scott Nguyen ““
