Hiring Team Research Ignited LLC

Dear Hiring Team,

I am excited to apply for the Online Aerospace Engineering Instructor position with Research Ignited. As both an aerospace engineer and educator, I am passionate about helping students discover how engineering concepts connect to the aircraft, spacecraft, drones, and technologies they encounter every day.

My background combines professional aerospace engineering experience with extensive teaching and mentoring experience across K–12 and higher education settings. Professionally, I have worked in Guidance, Navigation, and Controls roles with organizations including the Air Force Research Laboratory, NASA Johnson Space Center, MIT Lincoln Laboratory, Blue Canyon Technologies, Blue Origin, Varda Space Industries, and Space Dynamics Laboratory. Through these experiences, I have worked with autonomous systems, robotics, spacecraft navigation, orbit determination, satellite tracking, flight software, and aerospace simulation tools.

Alongside my engineering work, I have consistently pursued opportunities to teach and mentor students. I have served as a high school mathematics teacher, a Youth Development Professional with the Boys & Girls Club, a university teaching assistant for astronomy courses, a rocketry instructor through the National Defense Education Program, and a private tutor in mathematics, physics, and SAT/ACT preparation. These experiences taught me how to explain complex STEM topics in ways that are approachable, engaging, and tailored to different learning styles.

What excites me most about this position is the opportunity to introduce students to aerospace engineering through hands-on learning and real-world applications. Whether discussing how airplanes generate lift, how satellites remain in orbit, how drones navigate autonomously, or how engineers design space missions, I enjoy helping students build confidence while exploring challenging ideas. I believe the best STEM education combines curiosity, creativity, and practical examples, and I would be excited to bring that approach to Research Ignited's Aerospace Engineering & Mission Design Lab.

I am available for evening and weekend instruction and would be excited to support curriculum development, mentorship, and student capstone projects as needed.

Thank you for your time and consideration. I would welcome the opportunity to contribute to Research Ignited's mission of making advanced STEM topics accessible and exciting for students. I look forward to discussing how my background in aerospace engineering, teaching, and student mentorship can support your program.

Sincerely,

Scott Nguyen
